

Tree Care Guide for Hayes, VA

Gloucester County • ZIP codes 23072

Free estimates • 24/7 storm response • (804) 824-8551

Hayes sits in southern Gloucester County near the York River, just up Route 17 from the Coleman Bridge. It's one of our closest and busiest service areas — dense pine stands, older subdivisions, and a lot of trees growing tight to houses and power drops.

What Tree Care Looks Like in Hayes

- Hayes has heavy loblolly pine cover in neighborhoods off Route 17 and Guinea Road. Pines snap high in wind and drop tops onto roofs, so we watch for dead tops and beetle activity.
- Utility drops and overhead service lines run close to many Hayes driveways. We rig around them rather than dropping limbs blind, and we coordinate with the utility when a line has to be cleared.
- Homes nearer the York River and the Guinea marshes deal with saturated soil and wind exposure — a common recipe for uprooted trees rather than broken trunks.
- Stump grinding is popular in Hayes because so many lots are being re-landscaped; we grind below grade and backfill so you can seed right over it.

Hayes Tree Service FAQs

Are you local to Hayes, VA?

Yes. Our shop is in Gloucester, a short drive north on Route 17, so Hayes gets same-week scheduling and fast emergency response.

Can you remove pine trees leaning toward my house in Hayes?

That's one of the most common calls we get in Hayes. We evaluate the lean, root plate, and canopy, then plan a sectional removal so nothing comes down over the roof uncontrolled.

Do you grind stumps in Hayes after removal?

Yes. We can grind the stump the same day as the removal or come back on a scheduled return trip, grinding below grade and cleaning up the grindings.

Tree Removal in Hayes — FAQs

How much does tree removal cost in Hayes, VA?

Most residential removals in Hayes fall between a few hundred dollars for a small yard tree and a few thousand for a large pine or oak leaning over a house. Price depends on height, trunk diameter, lean, access for equipment, and whether the stump is included. We give free, written, no-obligation estimates for every Gloucester County address — call (804) 824-8551.

Do I need a permit to remove a tree in Hayes?

On private residential property in Gloucester County you generally do not need a permit to remove your own tree. Permits and utility coordination come into play for trees in a public right-of-way, in a conservation or Chesapeake Bay Preservation buffer, or touching power lines. We tell you up front which category your tree falls into before any work starts.

Can you remove a tree that is hanging over my roof in Hayes?

Yes — tight removals are the majority of our work in Hayes, VA. When there is no room to fell the tree in one piece, our climbers rig and lower sections in controlled pieces over roofs, fences, decks, and septic fields so nothing takes an impact.

What does a Hayes tree removal include?

Every removal includes dropping or rigging the tree down, cutting it up, hauling all wood and brush off your property, raking the work area, and a final walk-through with you. Stump grinding is quoted as an add-on so you only pay for what you want.

How do I know if a tree on my Hayes property needs to come down?

Warning signs include a new or worsening lean, soil heaving or cracking on one side of the trunk, mushrooms or conks at the base, deep bark cracks, large dead limbs, and a canopy that leafs out late or thin. If you see any of those near Route 17 or your home, we will come look at it for free.

Are you licensed and insured to remove trees in Gloucester County?

Yes. Wes Express Tree Service is fully licensed and carries liability and workers' compensation coverage, and we are happy to send proof of insurance to any Hayes homeowner, HOA, or property manager before we start.

Tree Trimming in Hayes — FAQs

When is the best time to trim trees in Hayes, VA?

Late winter through early spring — roughly December to March — is ideal for most hardwoods in Gloucester County because the trees are dormant, structure is easy to see, and wounds close fast in spring. Safety pruning of dead, broken, or roof-touching limbs can be done in any season.

How often should Hayes trees be pruned?

Young shade trees benefit from structural pruning every 2–3 years. Mature oaks, maples, and pines usually need attention every 3–5 years, or sooner if they are close to a roof, driveway, or service line. Storm-prone waterfront lots in Hayes often go on a shorter cycle.

Will trimming reduce storm damage on my Hayes property?

It helps a lot. Removing deadwood, thinning heavy end weight, and clearing crossing limbs lowers the sail area a nor'easter or hurricane can push on, which is one of the most common reasons limbs fail here on the Middle Peninsula.

Do you top trees?

No. Topping ruins tree structure and produces weak regrowth that fails in the next storm. We use proper crown reduction, thinning, and clearance pruning at correct branch collars instead, which keeps the tree healthy and safe.

Can you trim limbs away from my house, driveway, or power drop in Hayes?

Yes. Roof and driveway clearance and pruning back from the service drop to your house are routine jobs for us in Hayes, VA. If a limb is against a primary utility line, we coordinate with the utility rather than putting a crew at risk.

Do you clean up after trimming in Hayes?

Always. Brush is chipped or hauled, the work area is raked, and we walk the property with you before we leave — no piles left behind in ZIP codes 23072.

Stump Removal in Hayes — FAQs

How much does stump grinding cost in Hayes, VA?

Stump grinding in Hayes is priced by stump diameter and access, and it is significantly cheaper when we grind while our equipment is already on site for a removal. Ask for the stump price with your removal estimate and we will quote both together.

What is the difference between stump grinding and full stump removal?

Grinding chews the stump and surface roots into mulch to 6–12 inches below grade, leaving a fillable hole and minimal yard disturbance. Full extraction pulls the root plate out with heavy equipment, which is more invasive and usually only needed for new construction or hardscaping.

Will grinding a stump damage my lawn, septic system, or drain field?

Our grinders reach many Hayes backyards through a standard gate and we lay protection on soft, sandy ground. Before we grind, we locate the septic tank, drain field, irrigation, and utility lines so nothing gets cut or compacted.

Can I plant grass or a new tree where the stump was?

Yes. We can haul the grindings away and backfill with topsoil so you can seed right away. If you plan to replant a tree in the same spot, we grind deeper and remove more of the wood chips so the new root ball has real soil to grow into.

Do I have to grind the stump after a removal in Hayes?

It is optional, but old stumps in Gloucester County attract carpenter ants and termites, sprout suckers, and are a mowing and tripping hazard. Most homeowners choose to grind while we are already there.

How long does stump grinding take?

Most single residential stumps in Hayes, VA take 30–90 minutes including cleanup. A yard full of stumps or a large multi-trunk pine can run a half day.

Emergency Tree Service in Hayes — FAQs

How fast can you respond to a tree emergency in Hayes, VA?

We are based in Gloucester and answer the phone 24/7, so for most Gloucester County addresses we can have a crew on site within about an hour. Call (804) 824-8551 and tell us whether the tree is on a structure,

blocking a driveway, or near a power line.

A tree fell on my house in Hayes — what should I do first?

Get everyone out of the affected rooms, stay away from any downed wires, and call (804) 824-8551.

Photograph the damage from a safe distance for your insurance claim, then let our crew stabilize and remove the tree so a contractor can dry in the roof.

Do you work during and after storms and hurricanes?

Yes. We run storm response through nor'easters, tropical systems, and ice events across Hayes and the surrounding Middle Peninsula, prioritizing trees on homes, blocked driveways, and access for emergency vehicles.

Does homeowners insurance cover emergency tree removal in Hayes?

When a tree damages a covered structure, most policies cover removal of the tree from the structure and the repair, subject to your deductible. Trees that simply fall in the yard are often not covered. We provide itemized documentation and photos to submit with your claim.

Do you remove trees on power lines?

We never cut a tree that is contacting a primary utility line — that is the utility's work. We handle everything on your side of the meter and can clear the tree once the line is de-energized or the utility has cleared the site.

Do you charge extra for nights and weekends in Gloucester County?

Emergency call-outs after hours are priced case by case based on crew size, equipment, and risk, and we tell you the price before we begin. There is never a charge to call (804) 824-8551 and talk it through.
